

Name: Competency Measurement Research Group

Head of Research Group:

Szabolcs Takács, PhD

Established: 96/2018 (09.12.)sz. KT-regulation

Members:

Gergő Szabolcs Harsányi, PhD

Lilla Koltói, PhD

Dóra Kovács, PhD

Mrs. Kosztyu, Erika Nyitrai, PhD

Andrea Kövesdi, PhD

Olivér Nagybányai-Nagy, PhD

Gabriella Simon, PhD

Máté Smohai, PhD

Nándor Takács, PhD

Mrs. Takács, Judit Kárász

Krisztián Széll (ELTE PPK)

Brief description of research activity and profile:

The National Association of Basic Competencies Research Group was created to jointly process the data generated during the National Association of Basic Competencies Measurement with the Educational Authority (ENIC/NARIC Hungary) according to the aspects that are currently the focus of the research group. For e.g., the performance of Children with special needs and their background, parental involvement at the school and academic level, as well as the parents' socio-cultural background, their expectations of the school, and their related activity. Furthermore, we also monitor the background issues of the students' leisure/sports activities, as well as their correlation with their school performance.

It is also a priority for the research group to establish long-term cooperation with other university groups or researchers within the country, as well as to be able to provide research funds for the students of the university either in the implementation of TDK/OTDK (Scientific Student Conference/National Scientific Student Conference) or other projects appealing for them.

Joint publications published so far within the framework of the research group:

Publications published so far are available on the website of Psychologia Hungarica Caroliensis:

Individual publications published so far within the framework of the research group:

The members of the research group naturally also carry out other research activities, these can generally be viewed on the individual websites of the members (see members) - within the framework of the research group, we work together on the completed publications. It is also important to emphasize that our serious goal is to involve students present at the Institute in our research, either by writing TDK/OTDK or studies (further development of workshops with our support, presented as independent work - relying on the previous work of the research group).
